KERUS TOURS & TRAVELLERS

Executive Proposal — Digital Transformation, Brand Dominance & Customer Acquisition System

Prepared for: Rhoda Kerubo, Owner — Kerus Tours & Travellers, Nairobi, Kenya **Prepared by:** Parmenas Digital — Digital Transformation & Growth Partner **Date:** 13 August 2026 **Status:** Confidential — for the recipient only

The North Star From a business that customers can only reach **when they already have its phone number** → to a business that customers can **DISCOVER, TRUST, ENGAGE, BOOK, REVIEW and RETURN TO** through a sophisticated digital ecosystem.

This is not a website proposal. It is a proposal to build Kerus a **digital business engine**.

Verification legend

Every claim in this document is labelled:

Label	Meaning
[V]	Verified against a cited public source
[O]	Directly observed during our research
[I]	Inferred from research — reasonable but not proven
[R]	Our recommendation
[TBC]	To be confirmed with Kerus — discovery requirement

We do not fabricate customers, reviews, prices, rankings or claims. Where something cannot be verified, we say so.

1. Executive Opportunity

Kerus Tours & Travellers is a Kenyan car-hire, tours and travel business owned by Rhoda Kerubo. The business has been presented publicly through exposure involving a well-known social-media-driven sales personality in Nairobi [TBC — see §2.5], and Rhoda has put her contact number in front of potential customers.

The strategic insight: Kerus already has access to attention. The problem is that attention currently *terminates* at a phone number.

Today, the full value chain looks like this:

ATTENTION → PHONE NUMBER → (nothing else)

Everything a customer could do next — check the fleet, see prices, read reviews, trust the business, remember it tomorrow, book it, review it, return to it — happens **outside** the business. The attention evaporates, or worse, converts on a competitor's property.

The transformation we propose closes that loop:

ATTENTION → DISCOVERY → TRUST → INFORMATION → ENQUIRY → QUOTE →
BOOKING → PAYMENT → EXPERIENCE → REVIEW → REFERRAL → REPEAT BUSINESS

Each stage becomes owned, measured and optimised infrastructure. The outcome is not a nicer brochure — it is a system that **compounds attention into customers, and customers into a brand**.

Two macro facts make this the right moment [V]:

1. **Kenya's travel economy is expanding.** International tourist arrivals reached 2,394,376 in 2024, a 14.7% year-on-year increase (KNBS Economic Survey 2025), and continued rising through 2025 (source). Jomo Kenyatta International Airport alone recorded ~1.62 million arrivals in 2024 — 67.8% of Kenya's inbound tourists (TRI 2024).

2. **WhatsApp is Kenya's commercial operating system.** ~97% of Kenyan internet users are on WhatsApp, and reports put daily usage above 96% (as reported by; as reported by). A customer's phone number is not a dead end — it is the front door, *if* the infrastructure behind it exists.

The opportunity: **be the car-hire/tours business in Nairobi that is built for how Kenyans and visitors actually buy — discoverable on Google, trusted through reviews and founder presence, and bookable through WhatsApp.**

2. Current Digital Reality

We conducted a public digital intelligence audit (August 2026). The honest summary: **Kerus currently has no meaningful owned digital footprint that we could find.**

Area	Finding	Status
Website	No website found for Kerus Tours & Travellers	[O] Not found
Google Business Profile	No profile found under the business name	[O] Not found
Social media (TikTok, IG, FB, YT, LinkedIn)	No official accounts found	[O] Not found
Reviews (Google, Facebook, TripAdvisor)	None found under the business name	[O] Not found
Branded search results	Owned by unrelated brands : “Keru Safaris & Tours” (Nairobi safari company), “Kerus Global” (South African charity), “KR Travel & Tours” (Malaysia)	[O] Observed
Business registration / physical address	Not publicly verified	[TBC]
Fleet, pricing, rental terms	Not publicly available	[TBC]
The “Patrick” exposure context	Public reporting identifies Patrick Rianga (“Patrick Car Dealer”) as Nairobi’s best-known social-media-driven car-sales personality, formerly the public face of Car Soko until his announced departure on 1 July 2026 (source). The specific link between his content and Kerus could not be independently verified	[TBC]

2.1 What this means commercially

Having no owned digital property is not a neutral state — it is an active cost:

- **Attention leaks.** Every viral moment routes people to a phone number with no trust layer behind it. Conversion depends entirely on how Rhoda (or whoever answers) handles a call.
- **Zero discovery.** Kerus is invisible for “car hire Nairobi”, “self-drive Kenya”, “airport transfers JKIA” — the exact searches with money behind them.
- **No data.** No lead tracking, no attribution, no customer database, no ability to remarket.

- **No differentiation.** Without a brand layer, Kerus competes on price against thousands of operators, including unregulated ones.
- **No reputation bank.** Happy customers have nowhere to deposit public trust. Unhappy ones still have everywhere to complain.
- **Name risk.** “Kerus” is short, distinctive and currently unclaimed online — but an unrelated company (“Keru Safaris & Tours”) already occupies part of the brand space [O]. The name is an asset *if claimed now*; it becomes a liability if a competitor claims it first.

2.2 The one real asset

Kerus already has the two hardest things to buy: **a real business with real vehicles and real customers**, and **access to attention** through its network and Rhoda’s public visibility. The gap is purely infrastructural. That gap is what this proposal closes.

3. Market Opportunity

Kenya’s car-hire and travel market sits at the intersection of three growing demand streams [V where cited]:

Demand stream	Evidence
International tourism	2.39M arrivals in 2024 (+14.7% YoY); JKIA+MIA combined arrivals reached 1,955,000 in 2025 (KNBS via The Star)
Domestic & diaspora travel	Nairobi’s resident middle class, the Kenyan diaspora returning for holidays/functions, and the wedding/events economy — a segment most incumbents ignore in their marketing
Corporate & institutional mobility	NGO, corporate, event and project transport — served today mainly by older corporate players (e.g. Avenue Car Hire, 40+ years, 300+ vehicles) rather than consumer brands

Simultaneously, the buying behaviour has shifted: Kenyan customers research on TikTok/Instagram/Google, convert on WhatsApp, and trust reviews and founders more than polished ads. The businesses winning this market are not the ones with the biggest fleets — they are the ones that are **easiest to find, easiest to trust, and easiest to book**.

That is a digital problem, and it is solvable in months, not years.

4. Competitive Intelligence

We reviewed the competitive landscape across Nairobi, Kenya and international benchmarks [O].

4.1 Who plays where

Tier	Players	Strength	Weakness
International franchises	Avis, Budget, Europcar, Green Motion, Autounion (JKIA presence)	Brand trust, global bookings	Higher price points, weak local content and social presence
Self-drive safari specialists	Roadtrip Africa, Self Drive Kenya	Good SEO, strong 4×4 positioning	Thin on domestic/WhatsApp-first experience, dated social
Corporate/leasing leaders	Avenue Car Hire & Leasing (44 years, 300+ vehicles, 4.3★ from 126 reviews)	Institutional trust, fleet depth	Not consumer-social; corporate positioning
Value/local operators	Isura (4.9★/92 reviews), Kellymax (4.9★/304), Hire N’ Drive (4.3★/111), Unicorn (4.6★/149), TWIXT, Metro, Porto	Local service, price	Basic websites, opaque pricing, weak content, low TikTok presence
Social-first operators	Lipri Car Hire (10K+ Instagram followers)	Social proof	Thin web/booking layer

4.2 What everyone is doing

Brochure websites, WhatsApp buttons, Google Business listings, occasional posts. [O]

4.3 What competitors do poorly

- **Pricing opacity** — most sites hide rates or show stale prices; the customer must call.
- **No instant quoting** — no structured WhatsApp quote workflow; responses are ad-hoc and slow.
- **Weak content engines** — nobody in the category runs a systematic TikTok/Reels content machine, despite the category’s visual virality.
- **Tourist-only targeting** — domestic, diaspora and corporate customers are under-served.
- **No founder trust** — faceless operators; no human brand behind the business.
- **Low review velocity** — review counts in the tens-to-low-hundreds across the category [O].

4.4 What customers still struggle with

Hidden costs; unclear self-drive requirements and insurance; fear of being stranded; unverifiable operators (“is this company real?”); slow WhatsApp replies; no way to compare confidently.

4.5 Where the moat is (white space)

No Nairobi operator today combines: **transparent pricing + instant structured WhatsApp quoting + a systematic short-video content engine + a founder-led brand + a review velocity system + a CRM that remembers every customer**. That combination is the moat. It is visible in §14.

5. The Kerus Brand Opportunity

Kerus should be positioned not as an informal car-hire operation but as a **serious, modern mobility and travel company** — Kenyan in character, international in standard.

5.1 Positioning statement [R]

For travellers, families and organisations moving through Kenya, **Kerus Tours & Travellers** is the mobility partner that combines Kenyan hospitality with international rental standards — transparent pricing, documented and insured vehicles, and a booking experience built on WhatsApp and web — so every journey begins and ends with certainty.

5.2 Brand foundation

Element	Draft
Brand promise	A documented, insured, on-time vehicle — and a human who answers, every time.
Mission	To make hiring a vehicle in Kenya as trustworthy and effortless as booking a flight.
Vision	To become East Africa’s most trusted digitally-enabled mobility and travel brand.
Values	<i>Uhakika</i> (Certainty) · <i>Uwazi</i> (Transparency) · <i>Huduma</i> (Service) · <i>Usalama</i> (Safety) · <i>Ukuaji</i> (Progress)
Personality	A confident, warm, precise professional guide — not a hawker.
Voice	Clear, honest, warm, competent. No hype, no jargon, no fake urgency.

5.3 Tagline options [R]

1. **“Mwendo wako. Uhakika wetu.”** — *Your journey. Our certainty.*
2. “Move with certainty.”
3. “Driven by trust. Powered by Kenya.”
4. “The road, on your terms.”

5.4 Visual direction [R]

Deep forest green (trust, growth) + warm gold/sand (Kenyan savanna, premium) + clean typography, generous white space, real photography of the actual fleet and real customers. No stock-photo clichés, no excessive gradients, no template feel. The name renders as **KERUS** with “Tours & Travellers” as the descriptor.

5.5 The founder as a brand asset

Rhoda is not a logo — she is the trust layer. A founder-led brand strategy turns her story, voice and customer relationships into content that no faceless competitor can replicate (§11, and §12 of the Blueprint).

6. Proposed Digital Ecosystem

Six connected systems, owned by Kerus, feeding one data core:

System	Job it does
Website (kerus.co.ke + defensive .com)	The 24/7 sales and booking engine; the trust headquarters
Google Business Profile	Local discovery, maps, reviews, “car hire near me”
WhatsApp Business	Kenya’s primary conversion channel — structured, fast, trackable
Social channels (TikTok, Instagram, Facebook, YouTube)	Attention capture and brand building
CRM + analytics	Every lead, booking and review — attributed and remembered
Review engine	Post-trip review requests → Google + web reputation bank

The full technical architecture is in the Internal Blueprint (§4–§10).

7. Website Architecture

The website is a **digital sales and booking engine**, not a brochure. Every page has one job.

Page	Objective	Search intent	Primary CTA	Conversion goal
Homepage	Brand authority; route by need	Branded + “car hire Nairobi”	“Get a quote on WhatsApp” / Browse fleet	Click-to-WhatsApp or quote start
Fleet	Browse by class & purpose	“4x4 hire Nairobi”, “SUV rental Kenya”	Per-vehicle “Check availability”	Vehicle-level quote start
Vehicle detail	Sell that specific car	“Toyota Prado hire Nairobi price”	“Get instant quote — WhatsApp”	Quote with vehicle context
Self-drive	Requirements, insurance, process	“self drive car hire Kenya requirements”	“Start self-drive booking”	Qualified self-drive lead
Chauffeur services	Comfort & professionalism offer	“chauffeur driven car hire Nairobi”	“Book a chauffeur”	Chauffeur booking
Airport transfers	Fixed-price JKIA/Wilson meet & greet	“airport transfer Nairobi price”	“Book transfer”	Transfer booking
Tours & travel	Day trips, safaris, curated routes	“day trips from Nairobi”, “safari from Nairobi”	“Plan my trip”	Tour enquiry
Corporate hire	Accounts, invoicing, long-term	B2B “corporate car hire Kenya”	“Talk to our accounts team”	Corporate meeting/lead
Long-term rentals	Monthly rates, lease logic	“monthly car rental Nairobi”	“Get monthly quote”	Lease lead
Events & weddings	Wedding cars, group transport	“wedding car hire Nairobi”	“Check your date”	Event quote
About Kerus	Founder story, fleet care, standards	Branded	Follow / WhatsApp	Trust → conversion
Why choose us	Proof of differentiators	Comparison shopping	“Talk to us”	Trust → conversion
Reviews	Social proof wall + Google link	Transactional reassurance	“Book” / “Leave a review”	Conversion assist + reviews
FAQ	Requirements, deposits, insurance, fuel, fines	“car hire requirements Kenya”	WhatsApp if unanswered	Objection removal
Regional Travel & Contingency	Malindi, Mombasa, Vumba, Kilimanjaro, GRM	Transactional (“self drive safari Kenya cost”)	Related to WhatsApp Postcard directions	Strong lead + marketing

Every page carries structured data (schema), a speed budget, and UTM-tracked CTAs. Page-level SEO specs are in the Blueprint (§5).

8. Customer Journey

The ideal journey, with today's friction and the fix:

Stage	Channel	Friction today	Fix
Attention	TikTok / Reels / Patrick-style virality	None — this already happens	Systematise it (§11)
Discovery	Profile → link-in-bio	No profile, no link	Branded social bios → website
Trust	Website / GBP / reviews	Nothing exists	Fast site + reviews + founder story
Information	Vehicle pages, FAQ	Phone-only, slow	Transparent specs, prices, requirements
Enquiry	Quote form / WhatsApp	Ad-hoc conversation	Structured 2-minute quote flow
Quote	WhatsApp	Manual, inconsistent	Instant template + human handoff
Booking	WhatsApp	Verbal only	Written confirmation + deposit (M-Pesa)
Payment	Cash/M-Pesa	Untracked	Tracked deposit, receipt, balance terms
Experience	Vehicle handover	Unclear condition records	Digital check-in/out photos
Review	—	Never asked	Automated post-trip review request
Referral	Word of mouth	Untracked	Tracked referral codes / partner links
Repeat	—	Forgotten	CRM re-engagement before next need

9. WhatsApp Commerce System

WhatsApp is the conversion infrastructure, not a phone number.

Conversation architecture (Level 1 — instant, from today):

WELCOME

"Karibu Kerus Tours & Travellers! ☐ What do you need today?"

1. Self-drive 2. Chauffeur 3. Airport transfer
4. Tours 5. Corporate 6. Talk to a person

Level 2 – qualification (automated quick replies): Name · pickup location · start date · return date · vehicle preference · passengers · self-drive requirements (licence, age, deposit) · special needs.

Level 3 – quote & book (human + templates): structured quote → written confirmation → M-Pesa deposit (Paybill/STK) → receipt → booking reference → pre-trip reminder → handover photos → return & inspection → review request → “save my number” re-engagement.

Service standard [R]: first response under 5 minutes in business hours (auto-reply + quick replies), every conversation logged to the CRM with its source. The full flows, template library and handoff SLAs are in the Blueprint (§8).

10. SEO Strategy (12–24 months)

We do not promise rankings. We build the only things that produce them: technical quality, content, citations, reviews and authority.

Layer	Focus	Examples
Branded	Own every result for the name	“kerus tours & travellers”, “kerus car hire”
Local	GBP + citations + maps	“car hire Nairobi”, “self drive car hire Nairobi”, “car hire JKIA”
Commercial	Vehicle & service pages	“toyota prado hire nairobi price”, “monthly car rental Kenya”, “wedding car hire Nairobi”, “chauffeur Nairobi”
Informational	FAQ + guides that earn links	“car hire requirements in Kenya”, “self drive safari Kenya cost”, “JKIA to West-lands transfer”
Travel/destination	Road-trip & itinerary content	“Nairobi to Maasai Mara road trip”, “day trips from Nairobi”, “Lake Naivasha self drive”

Tactics: technical SEO foundation, internal linking architecture, 30+ local citations, GBP optimisation (posts, photos, Q&A, review velocity), digital PR to travel blogs and diaspora platforms, monthly content production, measurement via Search Console + rank tracking (directional, not guaranteed). Full cluster map and content calendar in the Blueprint (§6).

11. Content Engine

One repeatable machine, nine pillars:

Fleet (walkarounds, availability) · **Education** (“how car hire works in Kenya”) · **Travel** (destination guides) · **Trust** (customer stories) · **Behind the scenes** (vehicle prep) · **Founder** (Rhoda’s journey) · **Social proof** (real customers) · **Offers** (seasonal) · **Authority** (travel intelligence).

The repurposing system: one monthly shoot → 1 YouTube long-form → 3–5 TikTok/Reels cuts → 1 blog guide → WhatsApp status clips → GBP posts → email/status broadcast. Cadence targets: TikTok/Reels 3×/week, Facebook 2–3×/week, YouTube 1×/week, blog 2×/month, WhatsApp Status daily. Founder content: Rhoda’s story told in her voice, weekly — the human trust layer behind the brand (§5.5).

12. Automation

The system removes manual work **without removing the human relationship**:

Website enquiry → CRM · WhatsApp enquiry → CRM · Booking → confirmation · Payment → receipt · Upcoming booking → reminder · Return → review request · Inactive customer → re-engagement · Repeat customer → loyalty offer · Review → reputation database · Content → publishing workflow.

Every workflow, trigger and tool is specified in the Blueprint (§10).

13. Analytics & Measurement

One executive dashboard (Looker Studio) answering the six money questions:

Where are our customers coming from? · **Which channel generates the most bookings?** · **Which vehicle produces the most revenue?** · **What is our customer acquisition cost?** · **What is our repeat booking rate?** · **What percentage of enquiries become bookings?**

Tracked: visitors, search impressions/clicks, Maps actions, WhatsApp clicks, calls, quote requests, bookings, conversion rate, traffic sources, cost per lead, cost per booking, revenue by channel, returning customers, reviews, SEO growth. Event taxonomy and dashboard spec in the Blueprint (§11).

14. Competitive Moat

The moat is not any single feature — it is **assets that compound and get harder to copy every month**:

Asset	Why it compounds
Customer database & booking history	Every campaign smarter than the last; nobody can buy your history
Review portfolio (velocity + volume)	Google trust compounds; late competitors start at zero
SEO authority & content library	Pages rank for years; rankings are path-dependent
CRM workflows & automation	Operational advantage that scales without adding staff
Brand recognition (incl. founder brand)	Attention → recall → direct/branded search
Partnership & referral network	Distribution that competitors cannot easily replicate
First-party analytics	Pricing and channel decisions based on real data

15. Implementation Roadmap

Delivered through the **Kerus Digital Growth Engine** programme, structured by the **Mwendo Framework** (*working name — Swahili for “movement / journey / pace”*):

DISCOVER → POSITION → BUILD → CONNECT → ATTRACT → CONVERT → RETAIN → OPTIMIZE → SCALE

Phase	Focus	Timeline
0 – Intelligence & Strategy	Facts confirmed, audit completed, pricing & brand approved	Weeks 1–2
1 – Digital Foundation	Domain, email, GBP, WhatsApp Business, analytics, CRM setup	Weeks 2–4
2 – Brand & Website	Brand system + full booking-engine website live	Weeks 4–10
3 – Search & Local Visibility	Technical SEO, citations, GBP optimisation, review engine	Months 2–5
4 – Social & Content Engine	Channel setup + content machine running	Months 2–6
5 – WhatsApp & CRM	Structured quoting, booking flow, data model	Months 3–5
6 – Automation	Booking/reminder/review/re-engagement workflows	Months 5–8
7 – Growth & Partnerships	Ads scaled on CAC, partnership network	Months 6–12
8 – Optimize & Scale	Continuous: data-led improvement, expansion	Month 6 onward

16. 90-Day Plan

Operational goals – no guaranteed rankings, revenue or virality. Just measurable infrastructure:

#	Outcome	Proof
1	Digital assets live	Website, GBP, TikTok/IG/FB/YT, WhatsApp Business, analytics
2	Website indexed	Search Console verified; core pages indexed
3	Google presence established	GBP verified, optimised, 10+ posts/photos
4	Enquiry mechanism operational	Quote form + WhatsApp flow end-to-end
5	WhatsApp funnel operational	Auto-reply + qualification flow + templates
6	Analytics operational	GA4 + Search Console + dashboard v1
7	Content engine active	12+ short videos, 2 blog guides, Status daily
8	Review system operational	5+ invited reviews on Google
9	Lead tracking operational	100% of new leads logged with source

Week-by-week execution detail is in the Blueprint (§19).

17. 12-Month Vision

If executed, twelve months from now Kerus looks like this:

Today	Month 12
Customers can only find Kerus if they already have the number	Customers find Kerus on Google, Maps, TikTok and Instagram — branded and non-branded
No website	A fast, professional booking-engine website with transparent pricing
No reviews	A growing 4.7★+ Google review portfolio
Ad-hoc WhatsApp conversations	A structured quote-to-booking WhatsApp system with <5 min response
No data	Every lead, booking and channel measured; CAC known per channel
One-off customers	Repeat rate tracked and grown; corporate accounts emerging
Invisible brand	Recognisable brand + founder presence; partnerships distributing Kerus

18. Long-Term Vision (3–5 Years)

From car-hire business to **digitally enabled mobility and travel company** — but only where technology makes commercial sense:

- **Customer portal** — bookings, documents, invoices, repeat booking in two taps
- **Online fleet management** — availability, maintenance, utilisation
- **Progressive web app** (then native app at scale) — booking + loyalty
- **Corporate dashboard** — for institutional accounts
- **Loyalty & referral programme** — data-driven retention
- **Partner portal** — hotels, agencies, creators
- **Multi-city / regional expansion** — Mombasa, Kisumu; East Africa via partnerships
- **Marketplace integration** — travel aggregators as an additional demand channel

Each is gated on real data (volume, CAC, retention) — recommended only when the numbers justify it. Full gating criteria in the Blueprint (§16).

19. Partnership Model

The role: Digital Transformation & Growth Partner — not “website developer”.

Why continuity matters — stated plainly, with no lock-in:

1. **Strategy + implementation + data + optimisation are one system.** SEO, content, reviews and automation only produce value when continuously managed; a website handed over and left alone decays within months in this category.

2. **The data compounds.** Whoever interprets the analytics month over month makes the next decision better. Handing a dashboard to a new party every six months loses that thread.
 3. **Kerus owns everything.** Domain, hosting, accounts, content, customer data and all credentials sit under Kerus's business email. Every system is built on open, standard, exportable technology. If Kerus ever chooses to leave, nothing is held hostage — the continuity argument is about performance, not possession.
-

20. Investment

Three engagement models, benchmarked against current Kenyan market rates for comparable scope (standard corporate sites KES 60,000–150,000; e-commerce/builds with integrations KES 80,000–300,000+; custom systems KES 150,000–500,000+ — teracreatives, oracom). **These are benchmark ranges, not a quotation; final figures depend on confirmed scope.**

Option	Scope	Setup (one-time)	Ongoing (monthly)
A — Digital Foundation	Strategy, brand, website, GBP, WhatsApp setup, analytics	KES 150,000–300,000	—
B — Foundation + Growth Management	A + SEO, content, social, reviews, reporting (min. 6 months)	KES 150,000–300,000	KES 40,000–75,000
C — Full Digital Transformation Partnership	A + B + WhatsApp/CRM system, automation, analytics, ads management, partnership engine	KES 150,000–300,000	KES 75,000–150,000

Third-party costs (separate, at cost, no markup): domain (.co.ke + .com, ~KES 1,500–4,000/yr) · hosting (~KES 8,000–24,000/yr) · Google Workspace (~KES 1,900/user/mo) · CRM (KES 0–3,000/mo) · WhatsApp API usage (KES 2,000–6,000/mo at low volume) · M-Pesa transaction fees.

Advertising budget (recommended, managed within the retainer): KES 35,000–100,000/month from month 2–3, scaled strictly on measured cost-per-lead and cost-per-booking.

Recommendation: Option C (Option B minimum). The compounding assets in §14 — reviews, SEO, content, data — only pay off with continuity. A one-time build in this category is how competitors end up back in the same place two years later.

21. KPIs

Executive scorecard (directional targets — not guarantees):

KPI	90 days	12 months
Digital assets live & operational	100%	100% + automation live
Core website pages indexed (GSC)	>80%	100% + growing impressions
Google reviews (invited, organic)	5+	25–50, target 4.7★+
WhatsApp first response	<5 min (business hrs)	<5 min, automated qualification
Enquiries → bookings	baseline measured	≥25%
Leads logged with source	100%	100%
Short videos published	12+	150+
Blog guides published	2	20+
Organic sessions/month	baseline	3,000–8,000
Combined social following	baseline	10,000–25,000
Bookings via digital channels	baseline	30–50% of total
Repeat booking rate	baseline	≥20%
Cost per lead / per booking by channel	measured	known & optimised

22. Next Steps

Three decisions from Rhoda — this week:

1. **A 30-minute discovery call** to confirm the facts this proposal had to label [TBC]: fleet, pricing, requirements, registration, the Patrick context, goals.
2. **Approve the Phase 0 intelligence report** — confirmed audit, brand direction, fleet photography plan and a firm quotation based on confirmed scope.
3. **Select the engagement model** (A / B / C).

Then we begin. The first 30 days are already mapped.
